DETAILED ACTION

1. Applicant's amendment and accompanying remarks filed September 20, 2005 have been acknowledged.
2. Examiner acknowledges amended claims 11 and 28.
3. The rejection of claims 1-5 under 35 U.S.C. 103(a) as being unpatentable over Hsu, U.S. Pre-Grant Publication 2003/0222250 is withdrawn.
4. The rejection of claims 11-15 and 28-34 under 35 U.S.C. 103(a) as being unpatentable over Hsu, U.S. Pre-Grant Publication 2003/0222250 in view of Hsu, U.S. Pre-Grant Publication 2004/0206942 is withdrawn.

Information Disclosure Statement

5. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered. U.S. Patent Number 5,047,687 is listed in the specification on page 10 of the specification.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1-5, 11-15 and 28-34 are rejected under 35 U.S.C. 102(b) as being anticipated by 2003/0222250.

Hsu discloses a light emitting device on a substrate wherein the light emitting device comprises an anode, a cathode, an active emission layer positioned between the anode and the cathode, and a buffer layer positioned between the anode and the active emission layer (see column 1, paragraph 0006). Additionally, the reference discloses that the buffer layer is comprised of an aqueous dispersion of an electrically conducting polymer (see paragraph 0019). Paragraph 0016 of the Hsu reference discloses that the buffer layer can be applied by ink jet printing as per instant claim 3. Also, it is disclosed in paragraph 0027 of the Hsu reference that there can be two or more buffer layer (plurality of substantially electrically isolated conducting polymer regions). Paragraphs 0021-0025 of the reference disclose that the anode and cathode are patterned wherein the anode and cathode strips intersect to form an electrically isolated pixel as per instant claim 5. Examples 17-20 of the Hsu reference discloses that the buffer layer is comprised of 1.5 to 2.0% w/w PEDOT/PSS in water. The conductivity of PEDOT/PSS is a physical property of the polymer conducting solution. Inherently, it is expected that the conductivity of the solution is within the range of 1.5×10^{-3} S/cm, as this is a physical property of the solution.

Response to Arguments

8. Applicant's arguments with respect to claims 1-5, 11-15 and 28-34 have been considered but are moot in view of the new ground(s) of rejection.
